

# Medieval Astrology Profile for William S Burroughs, Sr.

V.1. 30-Jan-2009. 7:58:20 PM, ASC 12VI50'31"

V.2. 7-Feb-2021. 11:21:14 AM, ASC 17TA20'36"

*Introduction to delineation of appearance and character in natal astrology.* The following document is a hand-written analysis of William S Burroughs, Sr., using the principles of medieval predictive astrology. The discipline of natal astrology focuses on the fate of an individual based on a horoscope cast for the moment of birth. Within natal astrology, the 1<sup>st</sup> house occupying the eastern horizon at birth describes the native: physical vitality, appearance, and character. Between the Hellenistic and Medieval eras several specialized models were developed to assess these characteristics. They include **longevity** (vitality and length of life), **physiognomy** (form and shape of the face and body), **victor of the chart** (overall life purpose), **manners** (social conduct including ethical behavior), and **temperament** (elemental mix of fire, earth, air, and water with applications in medical astrology). Prior research has presented models and results for longevity (*A Rectification Manual: The American Presidency*, Chapter 4) and physiognomy (*Astrological Physiognomy: History and Sources & Astrological Physiognomy: Empirical Tests of the Leo Rising Decan*).

*Victor of the Chart.* Included are two competing models for computing the victor of the chart said to be the single most powerful planet in the horoscope. According to Plato's follower Porphyry, by configuration in the natal horoscope the planet signifying the victor of the chart shows the life choice made by the soul prior to incarnation. Plato explains the details of his soul model in *The Myth of Er* found in the closing pages of his work *The Republic*. Porphyry and his peer Antiochus offer specific rules for determining the victor of the chart. The method of Antiochus/Porphyry is compared to a later method for determining the victor suggested by the Jewish Rabbi Abraham ben Meir ibn Ezra, a philosopher and astrologer active in the 12<sup>th</sup> century. For a discussion of these two models, see the companion paper *Victor of the Chart: Testing Methods of Antiochus/Porphyry and Ibn Ezra*, which serves as a key to what is presented here.

*Manners.* Plato was not alone among Greek philosophers in conceiving models for the soul. Aristotle's model of vegetative, sensitive, and intellective soul levels (assigned respectively to the plant, animal, and human kingdoms) was taken up by Ptolemy, who found a correspondence between the sensitive and intellective soul and Moon and Mercury in the natal horoscope. Configuration of the Moon and Mercury, with special emphasis given to their rulers, is a second method for analyzing the soul. Ptolemy introduces this model in *Tetrabiblos III.13* "Of the Quality of the Soul." Subsequent authors refer to this model as "Significators of the Soul" or "Manners." A summary template for the Moon and Mercury is presented in the paper and will be further developed in future versions.

# William S. Burroughs, Sr.

## **William Seward Burroughs Sr. (January 28, 1857 – September 14, 1898)**

William Seward Burroughs I was an American inventor born in Rochester, New York. Burroughs was the son of a mechanic and worked with machines throughout his childhood. While he was still a small boy, his parents moved to Auburn, New York, where he and his brothers were educated in the public school system.

He married his wife, Ida (née Selover) in 1879. They had two sons and two daughters: Jennie, Horace, Mortimer (father of William S. Burroughs II), and Helen.

In 1882, he started working as a clerk in a bank. Much of his job consisted of long hours reviewing ledgers for errors. At this time Burroughs became interested in solving the problem of creating an adding machine. In the bank, there had been a number of earlier prototypes, but in inexperienced users' hands, those that existed would sometimes give incorrect, and at times outrageous, answers. The clerk work was not in accordance with Burroughs' wishes, for he had a natural love and talent for mechanics, and the boredom and monotony of clerical life weighed heavily upon him. Seven years in the bank damaged his health, and he was forced to resign.

In the beginning of the 1880s (1880-1882), Burroughs was advised by a doctor to move to an area with a warmer climate and he moved to St. Louis, Missouri where he obtained a job in the Boyer Machine Shop. These new surroundings, which appealed to him more, hastened the development of the idea he had already in his mind, and the tools of his new craft gave him the opportunity to put into tangible form the first conception of the adding machine. Accuracy was the foundation of his work. No ordinary materials were good enough for his creation. His drawings were made on metal plates which could not expand or shrink by the smallest fraction of an inch. He worked with hardened tools, sharpened to fine points, and when he struck a center or drew a line, it was done under a microscope. So, he invented a "calculating machine" (first patent filed in 1885) designed to ease the monotony of clerical work. By 1890, the machines were well known in the banking industry, and adoption was spreading.

He was a founder of the American Arithmometer Company (1886). After his death, partner John Boyer moved the company forward after renaming it the Burroughs Adding Machine Company (1904).

He was awarded the Franklin Institute's John Scott Legacy Medal shortly before his death. He was posthumously inducted into the National Inventors Hall of Fame. He was the grandfather of Beat Generation writer William S. Burroughs and great-grandfather of William S. Burroughs Jr., who was also a writer. Burroughs also received a patent for an electric alarm clock in 1892. He died in Citronelle, Mobile County, Alabama and was interred in Bellefontaine Cemetery in St. Louis, Missouri.

## Rectification

### *Available Birth Data*

There is no Astrodatbank record. The National Investors Hall of Fame reports that William Seward Burroughs was born on 28-Jan-1857 in Rochester, NY. There is no reported birth time.

### *Proposed Rectification*

William S Burroughs I  
28-Jan-1857  
11:21:14 AM  
LMT +05:10:28  
Rochester, NY  
77w36'57  
43n09'17  
ASC 17TA20'36"

### Stage I. Determine the Ascendant sign

### *Firdaria*

Three events support the diurnal series and already point to Mercury as the victor.  
Major Mercury begins. Starts working as bank clerk.  
Mercury-Sun. Company is incorporated.  
Moon-Mercury. First dividend paid to shareholders.  
Conclusion: Figure is diurnal.

### *Moon's Configuration*

Time	Moon's Degree	Sect	Configuration
12:00 AM	7PI19	N	Moon applies to Saturn
2:17 AM	8PI40	N	Moon separates from Saturn and applies to Mars
5:45 AM	10PI43	N	Moon separates from Mars and applies to Venus
7:24 AM	11PI41	D	Moon separates from Mars and applies to Venus
5:02 PM	17PI23	N	Moon separates from Mars and applies to Venus
12:00 AM	21PI30	N	Moon separates from Mars and applies to Venus

For diurnal hours, the Moon separates from Mars and applies to Venus. The Moon's configuration will not help to refine daylight hours for Stage I rectification.

ZRS

For a diurnal figure, the L.Spirit range is 5CP33 - 00CA38. An evaluation of possible L.Spirit event matches reveals L.Spirit in Aries is the best match:

L1 Gemini from 30-Sep-1879 to 17-Jun-1899 times his entire professional career.

L1 Gemini-Sagittarius (foreshadowing), Patent applications granted.

L1-Gemini-Pisces, First dividend paid to stockholders.

L1-Gemini-Sagittarius (loosing of the bond), Received Scott Medal, 1897 (no date), Inducted National Inventors Hall of Fame, 1897 (no date), retired and moved to Citronelle, Alabama.

If the L.Spirit is in Aries, then the Ascendant range is 4TA – 5GE. The predominance of key career milestones for mutable signs suggests a Taurus Ascendant and a Lot of Fortune in Gemini, making the angles from the LOF in mutable signs.

Conclusion: Ascendant is Taurus

#### Stage II. Determine the Ascendant's range within 1-4 degrees

#### Sensitive Degrees

An evaluation of key life events including patent applications, awards, and subsequent business events of the Burroughs Corporation confirms the importance of mutable signs to Burrough's business career. Both the 19<sup>th</sup> and 23<sup>rd</sup> degree of mutable signs are highlighted:

Date	Measurement	Event
10-Jan-1885	1 <sup>st</sup> Patent application	trSat 18GE31-rx
17-Aug-1885	2 <sup>nd</sup> Patent application	trMerc 18VI19
20-Jan-1886	Company incorporated	trNorth Node 18VI51
14-Feb-1892	Patent for alarm clock granted	trJupiter 22PI33
5-Sep-1893	Patent for improvements to calculator	dsa Merc 21PI26
19-Sep-1897	Rcvd Scott Medal	trJupiter 22VI05
Posthumous		
9-Apr-1953	Burroughs Adding Machine Company renamed Burroughs Corporation; moved into digital products	trMerc 22PI50
2-Jul-1956	Burroughs purchased ElectroData company.	dsa Moon 22GE39, trMerc 22GE40
9-Sep-1959	Burroughs product release reduced computer costs.	dsa Mars 22GE37
17-Sep-1986	Burroughs completed purchased of Sperry	dsa Merc 22GE12, trNNode 22AR04 11 <sup>th</sup> LOF
11-Nov-1986	Burroughs-Sperry renamed Unisys.	dsa Merc 22GE20

These measurements suggest the Lot of Fortune is either in the 19<sup>th</sup> or 23<sup>rd</sup> degree of Gemini.

Stage III. Determine the exact Degree and Minute of the Ascendant

With no biography written of Burroughs, there are an insufficient number of events to complete the third and final rectification stage. Based on the evidence of sensitive degrees, I favor the L.Fortune in the 23<sup>rd</sup> degree of Gemini, but others may differ.

For purposes of computing a trial rectification, I present a single primary direction which timed the date his four patent applications were successfully processed. This is a speculative measurement which may drop out pending further research.

*Primary Directions*

### KEY – Mubtazz Scoring

Single point: assigns 1 point for each essential dignity

Early medieval: sign 5, exaltation 4, bound 3, primary triplicity lord 2, decan 1. Used by al-Kindī and Māshā'allāh.

Late medieval: sign 4, exaltation 4, triplicity lords (all) 3, bound 2, decan 1. Used by Schoener; taught by Zoller.

Fixed Stars from Janus 4.3 software. Criteria: conjunction within 2 degrees longitude.

### Additional

Moon's Configuration: Moon separates from Mars and applies to Venus, diurnal, conjunctional.

Moon-Mercury whole sign aspect? No. Moon and Mercury are inconjunct.

Do scoring methods agree? Saturn-Jupiter (sign-based); Jupiter (bound-based).

## Model Summary

(for model details see [www.regulus-astrology.com/research.html](http://www.regulus-astrology.com/research.html))

### Physiognomy

Ascendant sign: Taurus

Ascendant sign ruler: Venus/Pisces

Ascendant decan: Virgo

Ascendant decan ruler: Mercury/Aquarius-rx

Planets/Nodes placed in the Ascendant sign or decan: n.a.

Longevity: 41y 7m 16d

*Releaser and kadukhudhāh.* Figure is diurnal and Sun/Aquarius/10<sup>th</sup> qualifies as releaser. Bound lord Venus, in sign of exaltation, is oriental and is an acceptable kadukhudhah. Venus grants 82 major years, Mars is co-present and deducts 15 minor years; net projection is 67yrs which is too long.

As an alternate candidate, take Mercury as the victor. Mercury grants 76 major years but as a combust planet yields less than half that projection.

Victor of the Chart: Mercury/Aquarius-rx

Porphyry's Stage I criteria suggests several candidates with Mars (6), Mercury (5), and Jupiter (4) the high scorers. There is little doubt that Burrough's victor is Mercury/Aquarius-rx. He started as a bank clerk frustrated with manual arithmetic errors made by accountants. Burned out and overworked, he started his own company to create a device to solve these problems. His 'W. W. Burroughs Calculating Machine' had to be redesigned because of customer misuse of the equipment. His company achieved success after his death, leaving his legacy as the inventor of the leading adding machine equipment in the United States. During his lifetime he was unable to parlay his success as an inventor into larger business spheres. This can be seen by the failure of Mercury to apply to any other planet besides the Sun, which as the source of combustion, leaves Burroughs 'blinded by the light' and unable to move beyond the Mercurial spirit of the inventor and tinkerer.

Manners: Saturn-Jupiter (sign-based); Jupiter (bound-based).
